

HydroMaverich

Ibrido ad acqua

eair

CLEANER WITH LUBRICANT FOR THE SUCTION SYSTEM

We are the first in Italy in hydrogen cleaning

Decades of experience have allowed us to develop an important presence throughout the national territory with affiliated and specialized garages that offer our service

Assistance

We provide assistance telephone technique e first training for starting the machinery

Marketing

The Roll-up is supplied with the machine advertising and personalized support for your advertising campaigns online

Online presence

Thanks to the present map potential customers on the site will be conveyed directly to the affiliated workshops hydromaverich

Assistance and Training

Hydromaverich organizes training courses because you can work in peace and quiet safety and be a hydrogen professional! Contact us for more info

HydroMaverich s.r.l.

Via Trieste, 93
31020 San Vendemiano
(Treviso) ITALIA
Cel.: +39 320 2777744 e Whatsapp
e-mail: info@hydromaverich.it

HydroMaverich eCLEANER

It is a device that generates hydrogen from distilled water for the internal cleaning of endothermic engines such as petrol, diesel, lpg, methane and all types of vehicles: cars, vans, trucks, boats and power generators.

In particular, the eCLEANER device is able to reduce and destroy the carbon deposits inside the engine with a chemical process of hydrogen combination carbon.

All internal combustion engines fail to burn completely the fuel such as gasoline, diesel, lpg, or methane, for this reason polluting carbon deposits accumulate internally.

The hydrogen produced is introduced into the engine through the intake duct, in gas form and is drawn from the engine reaching up to the combustion chamber improving its combustion, performance, consumption and significantly lowering polluting gases.

The components involved in cleaning are: valves and EGR valve, turbine, injectors, piston, combustion chamber and drain line including FAP (Particulate Filter).

Hydrogen does not clean the intake ducts but it is possible anyway to clean them with the help of an additional product.

What are the advantages after treating the engine with eCLEANER ?

- Reduction of fuel consumption
- Reduction of harmful emissions
- Cleaning DPF, EGR valve and turbo, injectors, valves, combustion chamber, pistons
- Recovery of smooth running
- Recovery of engine power and torque
- Internal engine cleaning without having to disassemble it

HydroMaverich products boast thousands of tests carried out over the years and continuous research and development to improve the product

REMOTE CONTROL
TRANSPARENT GLASS
TWO OUTPUTS GAS

POSSIBILITY OF INTEGRATED DIAGNOSIS

eCLEANER

Technical features

Description: Ecleaner

Control: Manual 3 program

Power supply: 220v version shuko 16A

Type of engines: for all types of internal combustion engines.3500cc

Size: height 840 mm - base 500 mm - depth 500 mm

Hydrogen Production: High efficiency immersion cell and generation of pure gas without other residues, no additives, only distilled water.

eCLEANER 4.0

Technical features

Description: Ecleaner 4.0

Control: from android tablet including 10 "or mobile phone.15 program

Power supply: 220v version shuko 16A

Type of engines: for all types of internal combustion engines.6000cc

Size: height 840 mm - base 500 mm - depth 500 mm

Hydrogen Production: high efficiency immersion cell and generation of pure gas without other residues, no additives, only distilled water.

eCLEANER POWERFULL 4.0

Technical features

Description: Ecleaner 4.0 Powerfull

Control: from android tablet including 10 "or mobile phone.15 program

Power supply: 220v version shuko 16A

Type of engines: for all types of internal combustion engines.35000cc

Size: height 980 mm - base 700 mm - depth 700 mm

Hydrogen Production: high efficiency immersion cell and generation of pure gas without other residues, no additives, only distilled water.

OUR PRODUCTS ARE CUSTOMIZABLE ON REQUEST
