

HydroMaverich

Ibrido ad acqua

ePILOT

What is ePILOT

ePILOT is a Hydrogen production device to transform the engine into a hydrogen hybrid, its function is to clean the engine, becoming part of the fuel thanks to the continuous flow introduced into the combustion chamber.

BENEFITS

- BETTER PERFORMANCE
- BETTER CONSUMPTION
- LOWER POLLUTION VALUES

The new ePILOT device is available in different versions with different accessories.

ePILOT can be installed on all internal combustion engines, therefore cars, vans, trucks, tractors and boats powered by petrol, diesel, LPG and methane.

ePILOT

Technical features

Model: Epilot for all types of vehicles

Control: Visual lights for ignition and H2o level

Power supply: 12V or 24V available

Motor type: for all types of displacement modular system

Dimensions: height 360mm - base 400mm - depth 220mm

Hydrogen production: high-performance immersion cell and generation of pure gas without other residues, no additives, only distilled water

ePILOT 4.0

Technical features

Model: Epilot for all types of vehicles

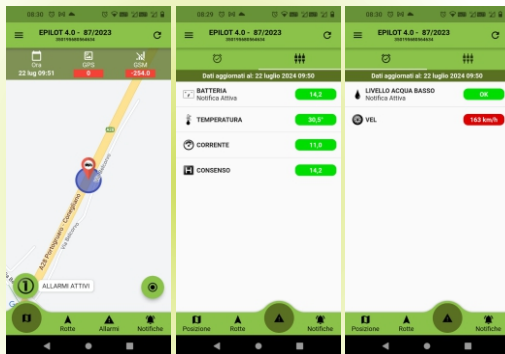

Control: App with water, battery, ampere, voltage and alarms

Power supply: available 12V or 24V

Motor type: for all types of displacement modular system

Dimensions: height 360mm - base 400mm - depth 220mm

Hydrogen production: high-performance immersion cell and generation of pure gas without other residues, no additives, only distilled water

ePILOT 4.0 is managed with a dedicated Application where it is possible to monitor the system data and its correct functioning, the new features are the automatic ignition thanks to the integrated GPS and the variation of the quantity of hydrogen produced based on the speed in order to further improve consumption.

MADE IN ITALY

HydroMaverich

Ibrido ad acqua

ePILOT 4.0

The EPILOT hydrogen generator device has been approved as a removable and tankless device, the amount of gas in circulation is low and does not constitute a risk of explosion and is not under pressure.

The HydroMaverich EPILOT device uses the latest technologies to generate hydrogen using very little energy.

You can install it permanently on your truck or your car and control it with our APP directly from your mobile phone.

The system does not modify the structure of the car as it is dosed in suction with a small nozzle and does not even modify the injection or the control unit of the car.

There is therefore no need for any transcription in the vehicle registration document, we provide all the necessary documentation with CE certification.

The savings recorded by our customers' tests range from 10% to 30% depending on the vehicle and conditions, performance increases of 5%, exhaust emissions reduction of 70-80%

It can be mounted on all types of combustion engines, petrol, diesel, LPG, methane.

It is also possible to mount it on all types of cars, sedans, SUVs, tractors, trucks, campers and boats.

The system must be checked once every 12 months by authorized personnel.

The EPILOT system works with demineralized water that is easy to find and does not require any additives.

EMISSION

HydroMaverich EPILOT

The HydroMaverich EPILOT device uses the latest technologies to generate hydrogen using very little energy.

You can install it permanently on your truck or car and control it with our APP directly from your cell phone.

START AND STOP FUNCTION and flow rate variation

Thanks to HydroMaverich technology and integrated GPS, the system operates only under established parameters and varies the amount of hydrogen to optimize hydrogen delivery at low and high speeds to optimize consumption.
